

*We're always with you.*

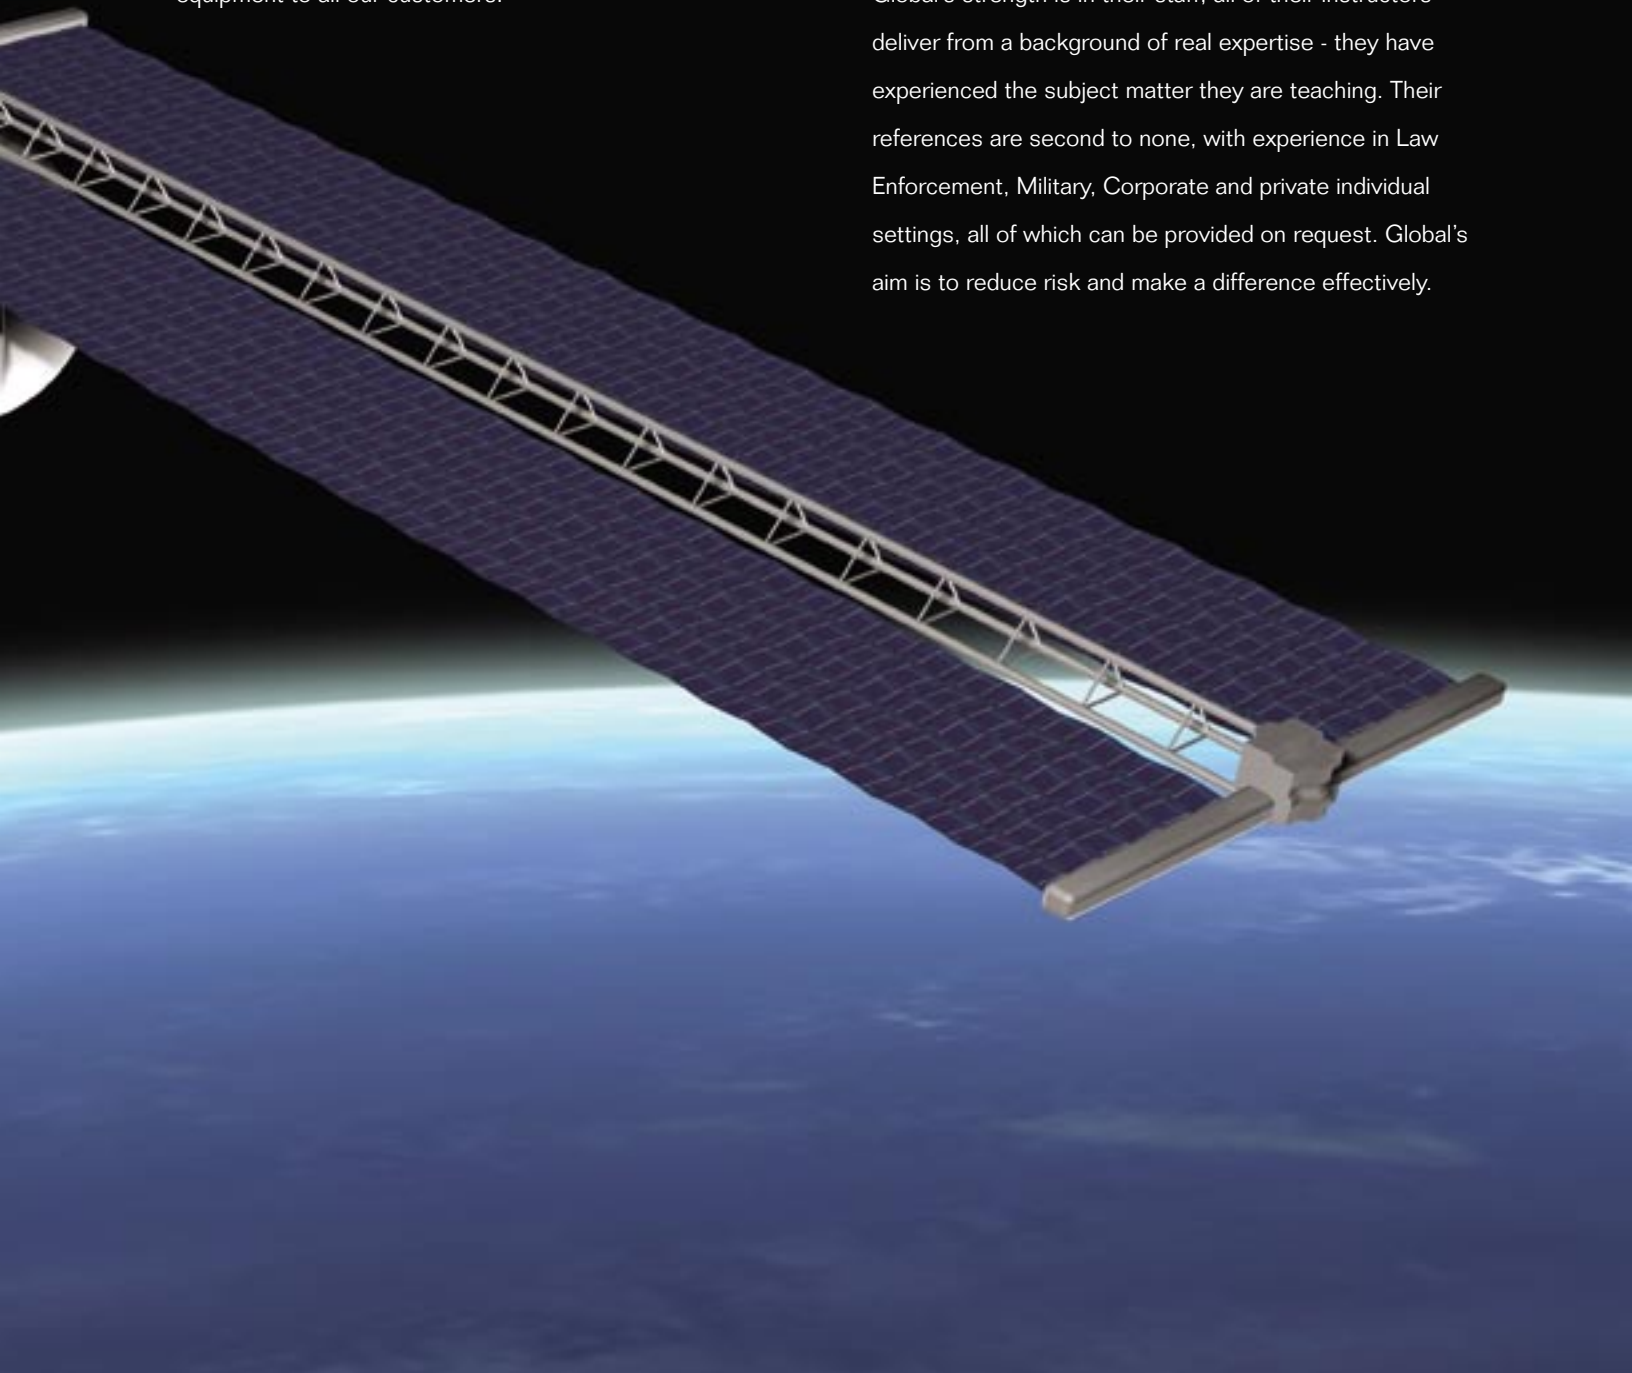

# Corporate Overview

Featuring the latest in GPS (Global Positioning System) technology, Global Resource Group specializes in putting a handle on fleet management. With our innovative GPS hardware and impressive CheckMate software, managing vehicle fleets has never been easier. The Global Resource Group prides itself on delivering state-of-the-art training, advice and technology equipment.

In addition to GPS technology, Global offers various training. Our focus is not only corporations and public safety agencies, but we will offer the same quality training and equipment to all our customers.

We can address most security and personal training requirements, and can also consult and advise as to how to identify cost effective methods of finding a solution to the customers needs. This is three fold; first, we identify your need, then propose a number of solutions, then finally identify the most cost effective method of delivery that can range from the traditional training method, to scenarios, to workshops and even vocational training. Global is flexible, we can deliver specialized training at any location worldwide or at our company training grounds.

Global's strength is in their staff, all of their instructors deliver from a background of real expertise - they have experienced the subject matter they are teaching. Their references are second to none, with experience in Law Enforcement, Military, Corporate and private individual settings, all of which can be provided on request. Global's aim is to reduce risk and make a difference effectively.

# Business Solutions

## ● Lower Your Fuel Bills

Lower fleet fuel bills equal higher net profits. A GRG fleet management system lets you attack high fuel bills in areas of speeding, unauthorized use, and idling. You know if you were riding in your company vehicles, your drivers wouldn't waste fuel by speeding, excessive idling or using the vehicle for side trips. With GRG, you can enforce these safety and cost-control measures with impartial data. The result: Fuel consumption and costs drop dramatically.

## ● Reduce Overtime & Billing Errors

Paying your drivers too much in overtime and billing your customers too much, or worse, not enough, can be huge burdens on your business. Global saves you big money by providing exact records of service billing, including when, where and how long. We also take the guesswork out of driver overtime estimations.

## ● Increase Fleet Productivity

Data is money! Global's detailed productivity reports show you exactly how your fleet is operating. We provide every detail of each driver's service stops, non-service stops and actual length of a service call or installation. Our systems allow you to act as if you were riding in your company vehicles twenty-four hours a day, seven days a week! You know that you and your employees would increase your productivity!

## ● Improve Asset Safety & Liability

Using Global's fleet management system can improve asset safety and liability, which can save you money! You can save money with your workman's compensation, liability insurance, and many other related payroll costs.

## ● Stop Unauthorized Vehicle Use

Avoid having your employees making unnecessary stops while on payroll. Using our GPS systems allow you to closely monitor your entire fleet with ease! Vehicle theft can be a threat to your business as well. With GRG's fleet managements system you could easily provide the necessary law enforcement the exact location of the vehicle.

## ● Elevate Your Customer Service

Your clients will be impressed with your knowledge of your fleet. You can easily show them how you can verify where and how long your fleet has been. Your employees will be more honest and your clients more satisfied.
