

GET TO KNOW US

Global Tracking Communications products and specialized solutions have been specifically designed to aid Government and Military demand. Customizable GPS Tracking applications are available upon request. Locate on demand vehicles and personal in uncharted terrain through desert, mountains, wind and snow. Intelligence is vital for field communication when in the trenches.

GTC offers an elite selection of real-time GPS Tracking devices. Each device is specifically designed and engineered to deliver imperative data and vital information for field communication and asset monitoring.

TRACKER5000D

TRACKER5000D

The T5000D is a hybrid real-time GPS tracking unit that uses both GPRS cellular service and the Inmarsat satellite system to communicate and send data. If covered under the GPRS cellular service, the T5000D will send all tracking data via GPRS, once the T5000D leaves GPRS cellular service then it will send the data by using the Inmarsat satellite system. this makes for seamless coverage throughout the world.
